Business Class Connectivity

Knowledge's ADSL Business Broadband services have been designed to meet the specific communications requirements of commercial organisations.

The Service delivers high-speed, low contention broadband connectivity services to remote offices, home, tele-worker groups and dispersed work forces. Our Business Broadband services provide the ideal solution for accessing and sharing central network resources.

Providing you with the right combination of speeds and service components to maximise your business productivity is what differentiates Knowledge from its peers. Our edge ADSL speeds range from 512k to 8Mb, can be Internet facing or designed to provide you with your own private ADSL Broadband network.

We can expand your broadband services into a fully extendable network infrastructure including site-to-site VPN, Global SSL-VPN, national IP-VPN, secure authentication and provide you with hosted voice and data applications. Service choice, scalability and expertise are just some of the reasons why so many organisations choose our Business Broadband services to connect their business locations to central network resources.

All of our Business Broadband offerings come complete with a fully managed and maintained Cisco VPN capable router, SMTP mail delivery, on-line usage reports and no download limits! 24/7 service management and alerting is delivered through our ISO and ITIL accredited Network Operations Centre, which is manned by experienced, industry accredited experts for complete service confidence.
